

Enhance your  
nitrogen efficiency to  
increase yields.

## KUGLER KQ2530X

Kugler KQ2530X gives you the ability to integrate soil-applied nitrogen with a supplemental post emergence, foliar application. With foliar applied KQ2530X, your plants get the extra shot of nitrogen they need—plus a sustained supply over a period of several weeks thanks to the 30% slow release formulation.

This versatile, highly efficient foliar nitrogen is from Kugler Company, so you can be assured that KQ2530X offers trouble-free application, easy handling and outstanding quality and performance.

With Controlled Release Nitrogen

# KUGLER KQ2530X

Combination of quick and controlled release nitrogen for optimal efficiency and results.

## Supplemental nitrogen provides results.

Successful nitrogen applications depend on many variables, including soil types, nitrate levels and planting dates. Then unexpected weather conditions can move in and upset the balance.

With nitrogen being a fundamental key to plant growth and a successful season, it makes sense to have a high-quality, supplemental nitrogen as part of your well-balanced fertilizer program.

Kugler KQ2530X fits this need perfectly, allowing you to integrate soil-applied nitrogen with a supplemental post emergence foliar application. This can help reduce normal soil-applied nitrogen and associated losses while increasing yields.

## Quick green-up followed by sustained growth.

A solid shot of readily available nitrogen gives your crop a leg up right when it needs it most. Plus with 30% being specially formulated for controlled release, your crop benefits for up to six weeks following application. That means Kugler KQ2530X gets more fertilizer to your crop when it needs it most and can do the most good.

## Controlled release boosts efficiency.

With 30% slow release nitrogen, Kugler KQ2530X ensures efficient uptake throughout critical stages of the growth cycle. This sustains growth over a longer term without surges that can adversely affect plant health and quality.

## Helping nitrogen stay put.

KQ2530X is formulated for maximum tissue adhesion to the plant surface—keeping it on the leaves of your crop to provide consistent nitrogen availability. This means a foliar application of KQ2530X helps reduce leaching and volatilization of nitrogen. KQ2530X can also be applied straight, without dilution, on a low per acre gallonge.

## Compatible with a variety of crops and chemicals.

Kugler KQ2530X can be used on a wide range of crops, including feed grains, forages, vegetables and oilseeds. The high quality of KQ2530X gives you the confidence to combine it with a variety of crop protection chemicals. In fact, applying KQ2530X with post-emergent chemicals can increase the efficiencies of both.

Kugler KQ2530X is designed to adhere to leaf tissue, allowing the plant to easily absorb nutrients over time. The photo above shows corn leaves immediately after a foliar application, while the photo below shows KQ2530X is still on the job 72 hours later.
