

## **SLOW RELEASE NITROGEN FOR MAXIMUM PERFORMANCE**

The slow-release nitrogen component of Kugler KS143SF helps reduce leaching and volatilization of nitrogen. It keeps this essential nutrient in place—staying on the job for up to six weeks. This means your crop gets the quick boost of nutrients it needs and sustained nitrogen availability for improved performance.

FERTILIZERS

### **Kugler Company**

**We make them. We sell them.  
And nobody does it better.**

Kugler is a family owned, Midwest based fertilizer company that has been helping agricultural producers succeed for decades. The foundation of that success is based in Kugler's company-wide commitment to the highest quality—from manufacturing to delivery to application, to the training and education we provide your local Kugler KQ dealer, to the innovative, leading-edge technology we bring to the fertilizer industry.

**Discover more about how Kugler quality can put your farming operation in step with the rest of your modern farming practices.**

# KS143SF

LOW SALT STARTER OR FOLIAR  
WITH SLOW-RELEASE NITROGEN

# KUGLER KS143SF

## A SPECIALIZED NUTRIENT PACKAGE IDEAL FOR IN-FURROW OR FOLIAR APPLICATION

KS143SF is a unique blend of slow-release nitrogen coupled with high quality, low-salt fertilizer products. Kugler's exclusive KS143SF offers the highest quality plant nutrition with the flexibility of applications plus plant safety. KS143SF can be applied many ways, ideally in-furrow or as a foliar application. The low-salt formulation makes it excellent for aerial and ground applications. Use caution through a pivot or gravity irrigation system. Check the compatibility of KS143SF with the well water prior to a pivot application.

### NUTRIENT VERSATILITY

KS143SF is compatible with many phosphorus, potassium and micronutrient sources as well as many crop protection chemicals. Kugler recommends testing for compatibility in all combinations by a simple jar test with appropriate concentrations.

### COMPATIBLE WITH A VARIETY OF NUTRIENTS

Kugler KS143SF's low salt index, nutrient uniformity, and soluble form make it an ideal choice to blend with micronutrients and other products to create custom fertilizers. Formulated for maximum tissue adhesion, KS143SF coats the plant's leaves and stays put for six weeks. In addition, foliar feeding stimulates plant growth, even at times of stress.
